

## Mac 64 Professional automatic coffee grinder

with flat grinder blades, micrometric adjusting device and adjustable filter holder position.

This Coffee Grinder grinds from 5-8.5grams, is fully automatic and plugs into 240V power point. Its capacity is approximately 16kg per hour.

**The large motor insures that the coffee does not overheat thus protecting the delicate flavour of the coffee.**

Micrometric adjusting device

Adjustable filter holder position.

More accurate coffee dosing

Grinder starts automatically after 6 pulls to fill up chamber - keeps dosage accurate and wont burn the coffee!

- 16kg per hour output
- Operates on 1600 revolutions
- Dosage Adjustment of 5 grams to 8.5 grams
- Dosage Capacity - 250grams
- **64mm grinder blades**
- Hopper Capacity - 1.2Kg
- Fully Automatic with Dosage to group cup

### Specifications:

Power 240V 10amps, 350watts /.5hp  
Dimensions: W 220mm x D 420mm x H 640mm - weight 16kg

### Doser Grinders

The doser grinder stores the ground coffee in a coffee chamber. This coffee chamber is divided into pie sliced shaped compartments, which are set to a certain dosage of ground coffee. Pulling the lever towards you will give you one dosage of ground coffee.

The doser grinders work very fast and are great for busy coffee environments. They are very easy to operate and reliable.

They are available in automatic or manual grind. The automatic starts the motor when ever the chamber is less that ½ full. This allows the dose to be more accurate and prevents partial fill of the filter basket.

## RR45 DELI COFFEE GRINDER

Deli Grinder is designed for Grinding Coffee directly into bags or filter holders. Spring clip which holds the container in place when coffee grinding
