Stainless Steel polished finish.

F-Compact JUICER

La F-Compact is our new automatic juicer, being smaller and compacter then the previous ones.

The **Frucosol** line of commercial juicers are designed to have the smallest number of moving parts as possible. The results of this simple design cause the Frucosol commercial juicers to **require very little maintenance**, if any. These juicers have more stainless steel and less plastic and are very heavy duty. With proper care, the **F-Compact should last a lifetime** or maybe even longer.

The **smaller 10" wide footprint** makes them easier for the shop owner to find a place for them on the countertop. The **F-Compact** has a ramp style citrus feeding system which enables an easier change from one citrus type to another, for example an orange to a lemon.

F-10 juicer

Do you only need small quantities of juice? Then, you need the FRUCOSOL F-10.

Key Features & Benefits

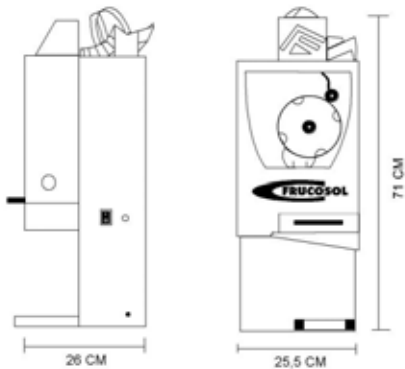

You will enjoy of tasteful citrus juices in a few seconds. It is completely made in bright stainless steel so it has an original look; due to its small dimensions it can be placed in any small surface. The cleaning can be washed in the dishwasher.

it can also be adapted to many type of business: hotels, bars, restaurants, coffee shops, fruit shops... produces an excellent yield as it is the user that controls the orange, rather than an automated machine part. Taste is also superb as the orange skin remains intact, preventing peel oil from imparting a bitterness to the drink. It is an excellent choice for juice bar use when the expense of a fully automatic machine is not appropriate

F Compact
