

### Aquaquell 1.5

**Prevents lime scale deposits.**  
Unpleasant tastes and odors are eliminated.

- Low cost – non sodium water filtration
- Space saving
- Quick & simple to change

**Change once a year**  
At Medium hardness 10°kh Selling 20 8oz cups @ day.

Full system **€149.00**  
Replacement cartridge **€59.00**

### Aquaquell Purity 300

Larger unit for heavy consumers of coffee  
**Prevents lime scale deposits.**  
Unpleasant tastes and odors are eliminated.

- Low cost water filtration
- Space saving
- Quick & simple to change

**Change once a year**  
At Medium hardness 10°kh Selling 70 8oz cups @ day

Full system **€489.00**  
Replacement cartridge **€95.00**

### Aquaquell Purity 600

Larger unit for heavy consumers of coffee  
**Prevents lime scale deposits.**  
Unpleasant tastes and odors are eliminated.

- Low cost water filtration
- Space saving
- Quick & simple to change

**Change once a year**  
At Medium hardness 10°kh Selling 140 8oz cups @ day

Full system **€95.00**  
Replacement cartridge **€150.00**

### Manual Resin Softener

Resin based softener- regenerated by using 1kg bags of salt and back flushing for 30 min approx. weekly, depending on the hardness and volume used. Needs a waste water outlet

8 litre **€150.00** 12 litre **€170.00**

### Why have a filter?

- ★ You can save money
- ★ Coffee tastes better
- ★ Use less electricity
- ★ No big service bill to fix scale related problems
- ★ No loss of turnover due to lime scale problems
- ★ Significantly reduced servicing costs
- ★ Coffee with a Fully-developed flavour & aroma
- ★ Coffee with a full bodied crema

### BRITA & Coffee machines

**Your appliances are very important to the day-to-day running of your business.**  
**You cannot afford to have your coffee machine act up or break down.**

Sometimes you can see the yellow scale on the water taps or you may have a scum on the tea. This is the first sign of water hardness. We can perform a simple test that will determine the level.

If you have hard water this can cause scaling on your element which will cause:

1. Increased electricity bill as your machine will have to work harder in order to keep the required temp.
2. The temp of the machine can drop resulting in cold tea & coffees.
3. The steam wand can loose pressure resulting in cold milk and poor froth.
4. The machine components can get blocked i.e. the steam wand, on/off switch, coffee outlet (solenoid) and so on.

Should any of these happen your machine might fail to work- depending on the hardness this could happen in the first few weeks.

If your coffee machine fails you can ring for service – meanwhile you are losing money!

Having a hard water filter fitted will result in better tasting beverages and no scaling.

We can install the filter system and is easily replaced with the easy to install cartridge when it needs replacing.

**The manufacture of any espresso machine will not cover problems arising from lime scaling so it is best to install a filter as soon as you install the machine if you have hard water.**

Your

**Coffee is only as good as the water!**
